

Database Design for NovaCart – Online Grocery Store

1. Introduction

This document defines the database structure for the NovaCart Online Grocery Store project. The system manages customers, products, orders, payments, and delivery processes. The database is designed to support a scalable e-commerce platform using a NoSQL structure similar to MongoDB while keeping the structure conceptually clear like relational tables for understanding.

2. Main Entities

- Users (Customers & Admins)
- Products
- Categories
- Orders
- Order Items
- Payments
- Cart
- Reviews
- Delivery

3. Database Tables / Collections

Users

- user_id (PK)
- name
- email
- password
- phone
- address
- role (admin/customer)
- created_at

Categories

- category_id (PK)
- category_name
- description

Products

- product_id (PK)
- product_name
- price
- stock_quantity
- category_id (FK)
- image_url
- description

Cart

- cart_id (PK)
- user_id (FK)
- product_id (FK)
- quantity

Orders

- order_id (PK)
- user_id (FK)
- order_date
- total_amount
- status

Order_Items

- order_item_id (PK)
- order_id (FK)
- product_id (FK)
- quantity
- price

Payments

- payment_id (PK)
- order_id (FK)
- payment_method
- payment_status
- transaction_id

Reviews

- review_id (PK)
- user_id (FK)
- product_id (FK)
- rating
- comment
- review_date

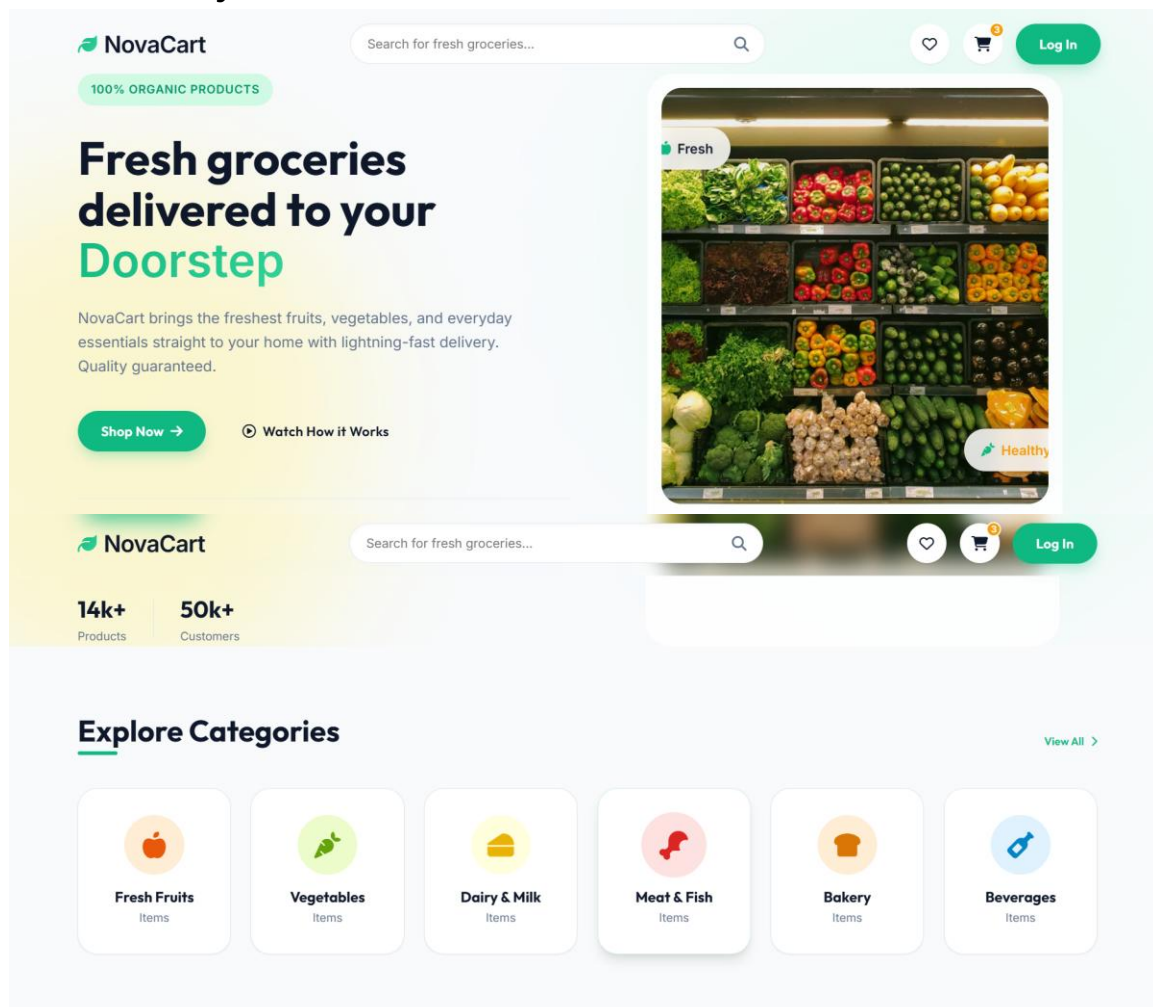

Delivery

- delivery_id (PK)
- order_id (FK)
- delivery_address
- delivery_status
- delivery_date

4. Relationships

- One user can place multiple orders.
- Each order can contain multiple products (Order Items).
- Each product belongs to one category.
- A user can review multiple products.
- Each order has one payment record.
- Each order has one delivery record.

Website Layout:

 NovaCart

Your one-stop destination for fresh groceries, daily essentials, and healthy organic products. Fast delivery, guaranteed freshness.
